DIGITAL LITERACY PROJECT REPORT

Name:
Bhupendra Singh

Reg No:
25BAI10468

Branch:
B.Tech (AI & ML)

Year:
1st Year

Course Code:
CSE0001

Course Title:
Digital Literacy

Date:
25 March, 2026

INTRODUCTION

This Digital Literacy project is mainly focused on the idea of digital literacy and its importance in the present academic and professional environment. As a Student Digital Ambassador, the main aim of this digital literacy project is to assist other students to understand the ways to use digital tools efficiently, communicate professionally, and remain secure while using digital technologies. This digital literacy project has five tasks to cover the main areas related to infographics, digital portfolios, digital platforms, email etiquette, and cybercrime. By completing this digital literacy project, I have acquired considerable knowledge on the various digital platforms and enhanced my communication and analytical skills. This digital literacy project has helped me understand the importance of digital literacy in the academic and professional environment.

TASK 1: INFOGRAPHIC (WRITE-UP)

For Task 1, I designed an infographic on digital literacy using Canva. The infographic includes important information on topics related to digital literacy, such as the meaning of digital literacy, important digital tools for students, and safe internet practices, among others. The infographic was designed in a simple way with a clean layout, icons, and colors, ensuring that the information presented was visually appealing and easy to understand. The main aim of the task was to present important information in a simple way that can be easily understood by students.

As a result of undertaking this task, I found it interesting, especially in terms of organizing information in a way that does not involve writing paragraphs. However, the main challenge encountered in undertaking this task was ensuring that the appropriate layout was used and that a balance between text and other visual materials was maintained in order to avoid cluttering the infographic. This task helped me enhance my creativity and design skills, as well as understand the importance of using visual communication in spreading awareness compared to other forms of communication, such as text.

TASK 2: DIGITAL PORTFOLIO (WRITE-UP)

In this task, I was required to create and update profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for coding projects and is therefore an important platform for demonstrating programming skills. LinkedIn is a professional networking site where one can connect with various professionals and get updates on various job and internship opportunities. Kaggle is used for practicing various data science and machine learning problems.

In the next four years, I plan to use GitHub to upload various academic and personal projects to enhance my profile. I will use LinkedIn to connect with various professionals and get updates on various job and internship opportunities. Kaggle will be used to improve my problem-solving skills and gain knowledge in various fields of data analysis. This task was very important in helping me understand the need for a professional digital presence and how these platforms contribute to one's development.

TASK 3: PLATFORMS (WRITE-UP)

In this task, I was required to explore coding and collaboration tools. In the coding section, I registered for a HackerRank account and solved a problem for beginners. This helped me understand how coding sites function and improved my logical skills. In the collaboration section, I designed a Google Form titled "Digital Literacy Awareness Quiz." The form consists of five questions, and it is connected to a Google Sheet.

The task was very helpful as it exposed me to different tools that can be used for academic learning and collaboration. Coding sites like HackerRank are helpful for students, especially when learning programming. It helps learners build their confidence. Google Forms are helpful for creating surveys and collecting data. This task improved my understanding of how digital tools can be used for learning and collaboration in academics.

TASK 4: EMAIL ETIQUETTE (WRITE-UP)

In this task, I have learned about the use of professional email communication and social media etiquette. In digital communication, a common problem that individuals face is sending

informal or ambiguous emails to professors or professionals, which can result in a negative impression on the other person. For example, a student once sent an email to a professor without a subject line and used informal words like ‘Hey’ in the email, which caused confusion for the professor.

This can be avoided by using appropriate email etiquette, which includes a suitable subject line, polite words, and a formal greeting like ‘Respected Sir/Ma’am’. Emails should also be well-structured and concise. This task helped me understand the significance of using professional communication, which can reflect a person's personality and responsibility.

TASK 5: CYBERCRIME AWARENESS (WRITE-UP)

In this task, I was given the opportunity to learn about cybercrime awareness, focusing on phishing as a type of cybercrime. This is a crime where an attacker sends an email or a message that appears to come from a trusted source, with the aim of retrieving sensitive information such as passwords or account details. I was surprised by how easy it is for individuals to fall prey to this type of cybercrime by clicking on a suspicious link.

After completing this task, I have become very careful when I use the internet. One of the things I will be careful about is verifying the links I get and not sharing my personal details online. This task has helped me understand the significance of online safety and how I can be protected from online threats.

CONCLUSION

This project gave me a comprehensive understanding of digital literacy and its significance in today’s digital world. By completing all five tasks, I was able to learn how to use digital tools effectively, develop a professional digital presence, and communicate in a formal and responsible manner. Moreover, I was able to gain practical knowledge of various digital tools such as GitHub, LinkedIn, HackerRank, and Google Forms. Furthermore, by completing the cybercrime awareness task, I was able to learn about potential cybercrimes and their significance. This project was able to improve my technical, communication, and critical thinking skills, and I believe these skills will be very useful for me in my academic and professional life.
